- AI Tools Workshop from Be10x!

Interests

- Open Source Contribution
- Creative Writing or Journaling
- Public Speaking & Hosting Events
- Team Collaboration
- UI/UX Design and Frontend Development

Projects

Portfolio Website [🔗](#)

Responsive React based site

I developed a responsive personal portfolio website using React to showcase my skills, projects, and contact information. The site features a modular component structure, including a sticky Navbar for smooth navigation, a dynamic Home section with an introduction, an About section highlighting my background and skills section, a Projects section displaying key work with live demo links, and a functional Contact Form for direct communication.

Dice Game

A mini-game

This Dice Game is built using React and simulates a simple two-player game between the user and the computer. The application demonstrates core React concepts such as state management, conditional rendering, and basic game logic. It also includes responsive design and a reset score option for replaying rounds.

Live E-Commerce Project

Currently in development
